Change Request: API Enhancements for Event Management and Scan Filtering

Date: September 28, 2025

Dear Smartech Team,

As part of the preparations for the upcoming **PSME National Convention commencing on October 15, 2025**, we are reviewing the current API functions to ensure smooth operations during the event. In line with this, we would like to formally request specific enhancements to the existing API to better support event management and participant handling.

Background

Currently, the API endpoint:

GET https://psme-api.smartpay.ph/public/index.php/api/getScanData?scan={scanCode}

returns registration details across all events without distinction. This creates a limitation when handling multiple and simultaneous events, as the system cannot filter registrations per specific event.

Requested Changes

1. **New API Endpoint – List All Events**
   Introduce a new GET endpoint to retrieve a list of all available events, including their event IDs and basic details.

   Proposed Endpoint:
   GET /api/getEvents

   Expected Response Format (sample):

```
{
 "resultKey": 1,
 "resultValue": [
  {
   "event_id": 18,
   "event_name": "National Convention 2025",
   "event_date_start": "2025-10-10",
   "event_date_end": "2025-10-12",
   "location": "SMX Manila",
   "status": "Active"
  },
  {
   "event_id": 19,
   "event_name": "Regional Symposium 2025",
   "event_date_start": "2025-11-05",
   "event_date_end": "2025-11-06",
   "location": "Cebu",
   "status": "Upcoming"
  }
 ],
 "errorCode": 1,
```

Management System ISO 9001:2015 TÜVRheinland CERTIFIED www.tuv.com ID 9000012419

"errorMsg": ""
}

Purpose:

- Allow our systems to fetch available events dynamically.
- Provide event_id to be used as filter parameter in scan/search endpoints.

2. **Enhance Existing Endpoint – Event Filtering for Scan/Search**
   Add a new event_id parameter to the current scan/search endpoint.

   Current Endpoint:
   GET /api/getScanData?scan={scanCode}

   Proposed Enhanced Endpoint:
   GET /api/getScanData?scan={scanCode}&event_id={event_id}

   Expected Behavior:
   - If event_id is provided → return only registration data specific to that event.
   - If event_id is not provided → default to current behavior (return matching scan data across all events).

   Sample Response (with event filter applied):

{
"resultKey": 1,
"resultValue": [
{
"firstname": "John Julius",
"lastname": "Baldia",
"middlename": "",
"email": "jerichomorales81@gmail.com",
"prclicencenumber": "1234567",
"suffix_id": 1,
"suffix": "Jr",
"chapterid": 4,
"chapter": "Makati",

Email: national@psmeinc.org.ph Website: www.psmeinc.org.ph

Acceptance Criteria

- ☐ New /api/getEvents endpoint returns all active/upcoming/past events with IDs and details.
- ☐ /api/getScanData accepts event_id parameter for filtering.
- ☐ Backward compatibility is maintained (existing integrations without event_id still work).

In view of the upcoming National Convention commencing on **October 15, 2025**, we kindly request that these enhancements be prioritized and completed no later than **October 7, 2025**, to allow sufficient time for integration and testing. We trust in your support and prompt action to ensure a smooth and successful implementation.
